Local opportunity
Path qualification
Stateful realization
Realized outcome
Acceptance signal
Isolated draft throughput
Target-forward batching
V_k^{micro}
Acceptance is not C.
V_k^{micro} is not complete R_{target}.
Correctness qualification
Chosen token-ID contract
admissible path
blocked / diagnostic only
RTX batched / B570
diagnostics: qualification failure.
Realized speculative loop
D_{real} realized draft cost
R_{target} complete target work
X residual cost
C committed output
358H NPU: isolated advantage
does not survive the tested
stateful integration.
Qualified
post-prefill decode
Observed regimes:
profitable
exact but negative
M4: separate Metal studies;
opposite observed outcomes.
Neither diagnosis assigned.
Measured mechanisms are configuration-scoped and non-exhaustive.
